

# **MANUAL INSTRUCTION TO INSTALL THE TABLE**

1. Begin by assembling the legs according to the instructions provided inside the legs box.
2. After assembling the legs, proceed to measure and position them in the middle of the table top, specifically on the back side of the table.
3. **IMPORTANT: Disregard the presence of any hole at the back of the table top; it should not be utilized or considered during the assembly process.**
4. Take the provided screws and insert each one into the corresponding holes on the legs, but only halfway. To accomplish this, utilize a power drill, as the table top does not come with pre-made screw threads. **Do not use Allen key or screw driver**
5. Once all screws are partially inserted, gradually tighten each screw until there are no gaps between the legs and the table top. In the event that a gap remains, use a hammer to carefully knock the screw in until the gap is eliminated.
