Drawer Installation Guide

- Before you insert the drawers into the frame, please ensure that the ball bearing sliders (on the assembled unit) have been placed to the front of the main unit. If the bearings are in the middle of the slider it will be difficult to install the drawers correctly.

- Insert the drawer into the assembled frame as show below. Keep each side of the drawer straight and aligned correctly to the sliders on the assembled frame.

- Gently start to push the drawer into position, the drawer sliders should start to connect with the sliders on the assembled frame. Once connected apply even pressure to each side and gently push the drawer into place.
- The ball bearings should catch the drawer sliders, once they do you may find that you need to apply more pressure, this is perfectly normal as long as you are keeping the drawers straight, push the drawers 100% of the way in. Finally slide drawer in and out a few times to ensure the ball bearings are running smoothly in the slider. Installation is complete.
- At any stage throughout the install process you feel like the drawers are not evenly sliding into the assembled frame, please remove the drawers before they start to attach to the bearing slider and start the install steps again.

HOW TO ADJUST YOUR HINGES AND ALIGN THE DOORS

This adjustment is used if your doors are overlapping in the middle OR there is a larger gap through the middle or on the sides

STEP 1
Please loosen the screw
to adjust the door.

STEP 2
Adjust the door.

STEP 3
After adjust, tighten the screw.

Follow the adjustments and make sure the middle pin is correctly installed as per previous instructions. If the middle pin isn't correctly installed then this adjustment will not work correctly.

If you tighten/loosen this screw it will adjust the doors to the left/right.

This step usually takes small adjustments and then closing doors to see if the gaps have evened out. Sometimes just half a turn of the screw can make a big impact to the gap.

The hinges are correctly installed and in position once you have a nice straight gap down the sides of the cupboard between the door and the side of the cupboard cavity.

ELARA LARGE SIDEBOARD

ITEM CODE: 5344 (5250)

This adjustment is used if your doors have a big gap at the top or the bottom, or if one door sits straight but is lower than the other door.

This adjustment is used if your doors are TOO CLOSE to the main cavity. You can loosen the screw and then move the door hinge closer or further out depending on the outcome you want to achieve

A

- PUSH THE ROLLER OF Z1 TO THE FRONT SIDE OF THE BODY.

B

C

- PUSH IN LEFT & RIGHT SIDE OF THE DRAWER INTO THE BODY SIMULTANEOUSLY.
- WHEN THE DRAWER IS PUSHED IN HALF WAY, THE STOPPER ON Z2 WILL BE ENGAGED INTO Z1. THIS WILL CAUSE THE PUSHING A BIT TIGHT. (PULL OUT THE DRAWER A LITTLE BIT AND SLOWLY PUSH IN THE DRAWER AGAIN TO CHECK WHETHER THE DRAWER IS STUCK / THE DRAWER GLIDE IS INSTALLED CORRECTLY.)
- DO NOT PUSH IN THE DRAWER IF THE DRAWER IS STUCK OR CANNOT BE PUSHED IN SMOOTHLY. TAKE OUT THE DRAWER AND REPEAT STEP 1 & 2.

- ALIGN Z2 ON LEFT & RIGHT TO Z1 AT THE CORRECT POSITION.

Tips & Tricks

**Make sure that the hardware used is suitable for supporting your unit.
Please consult a qualified tradesperson if unsure.**

- ✓ If you are unsure, please select a larger screw and wall plug.
- ✓ Ensure that you use the recommended drill bit to match the wall plug and hole size.
- ✓ Take extra care when drilling high walls, ceiling and ceramic tiles. Ensure wall plugs are inserted beyond the thickness of the ceramic tiles to avoid splitting or cracking.
- ✓ Ensure that wall plugs are well fitted and are a tight fit in the drilled hole.

Types Of Walls

Use one of the following types of wall plug (not included) if your walls are made of brick, breeze block, concrete, stone or wood. Screws may be able to be fixed directly to solid wood walls as they will provide a secure anchor point.

1. General purpose wall plug

Generally aerated blocks should not be used to support heavy loads, use a specialist fitting in this case. For light loads, general purpose wall plugs can be used.

2. Plasterboard wall plug

For use when attaching light loads on to plasterboard partitions or hollow wooden doors.

3. Cavity fixing wall plug

For use with plasterboard partitions or hollow wooden doors.

4. Cavity fixing-heavy duty wall plug

For use when fitting or supporting heavy loads such as shelving, wall cabinets and coat racks.

5. Hammer fixing wall plug

For use with walls stuck with plasterboard. The hammer fixing allows it to be fixed to the wall rather than the plasterboard. Always check the fixing is secure to the retaining wall.

6. Shield anchor wall plug - heavy loads

For use with heavier loads such as TV & HiFi speakers and satellite dishes etc.
