## DRAWER INSTALLATION GUIDE

- Before you insert the drawers into the frame, please ensure that the ball bearing sliders (on the assembled unit) have been placed to the front of the main unit. If the bearings are in the middle of the slider it will be difficult to install the drawers correctly.

- Insert the drawer into the assembled frame as show below. Keep each side of the drawer straight and aligned correctly to the sliders on the assembled frame.

- Gently start to push the drawer into position, the drawer sliders should start to connect with the sliders on the assembled frame. Once connected apply even pressure to each side and gently push the drawer into place.
- The ball bearings should catch the drawer sliders, once they do you may find that you need to apply more pressure, this is perfectly normal as long as you are keeping the drawers straight, push the drawers 100% of the way in. Finally slide drawer in and out a few times to ensure the ball bearings are running smoothly in the slider. Installation is complete.
- At any stage throughout the install process you feel like the drawers are not evenly sliding into the assembled rame, please remove the drawers before they start to attach to the bearing slider and start the install steps again.

## HOW TO ADJUST YOUR HINGES AND ALIGN THE DOORS

This adjustment is used if your doors are overlapping in the middle OR there is a large gap through the middle that you want to even out.

To begin, carefully tighten/loosen the screw as shown in the diagram it will move your doors to the left or the right.

This step usually takes small adjustments and then closing doors to see if the gaps have evened out.

Sometimes just half a turn of the screw can make a big impact to the gap.
