Assembly Tips:

Please ensure the screw A is screwed vertically onto the board. DO NOT screw it too deep or too shallow. Otherwise, the part B won't lock screw A firmly in the following steps, or the screw A would become loose easily. Then the table would wobble after assembly.

Tips for LED lights:

Before assembly, connect the light strip with a 5V/2A power adaptor and check if it is working fine first. If there is no problem, check the tips below:

Please DO NOT unplug all the connections of the lights before assembly, or the connections would be easily mixed up.

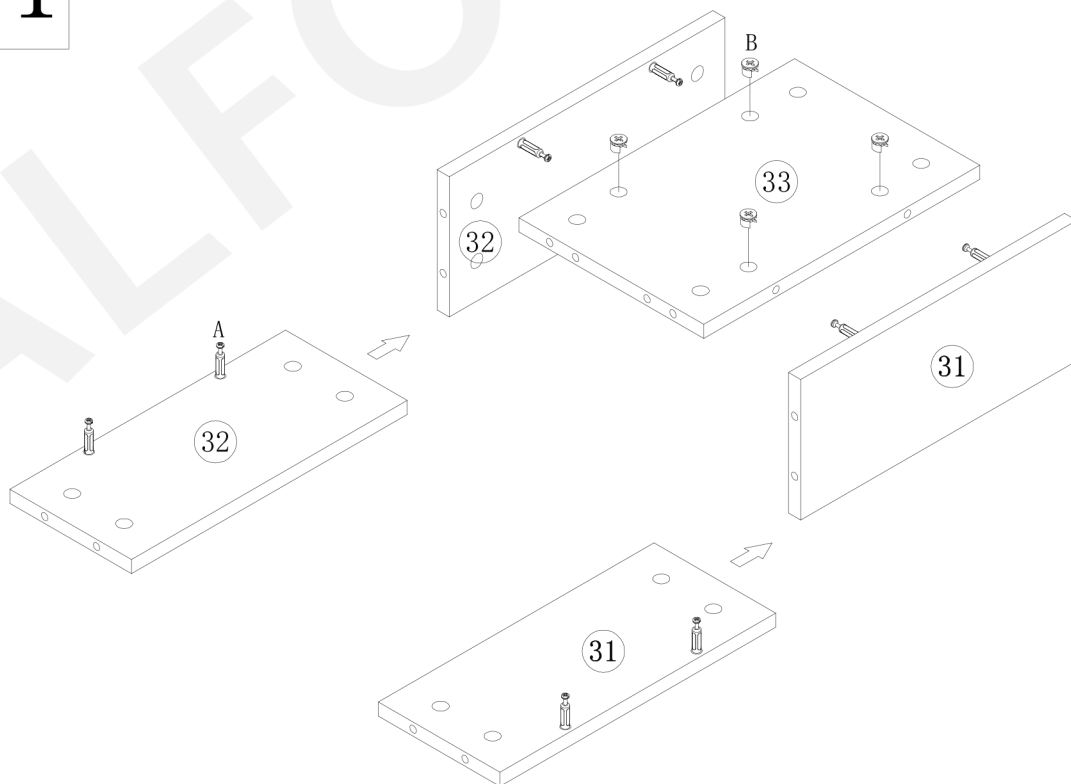

The best way is to disconnect one light from the light strip each time. Put the cables of that light through the hole from the front of board 8 & reconnect the light with the light strip from the back of board 8. Repeat the same steps for the rest of the lights.

Ensure that the red cable is connected with the blue cable, or the lights won't turn on.

After all lights are connected in place, tighten the metal threading part with the light one by one. It is located right under each light. Then peel off the back sheets of the lights and stick the lights onto board 8 in place.

Assembly Tips: Adjust the related screws of the hinge so that the position of board 30 could be adjusted.

Assembly Tips:

There are only 2 pre-drilled holes in board 32 for each hinge G. Place 2 screws D into the pre-drilled holes first and tighten them for about 80%. After that, rotate the other 2 self-tapping screws D into the rest of the 2 holes of hinge G, and finally fully tighten the first 2 screws D.
