Strip Wine Rack Instructions

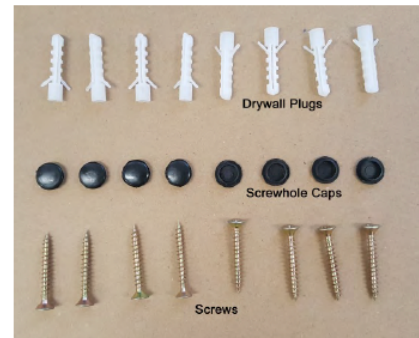

Parts Included

1 Bottle End Holder – Strip A

1 Bottle Neck Holder – Strip B

Screws
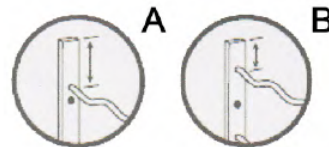

Screw Hole Covers

Drywall Plugs

Tools Needed

Tape Measure

Phillips Head Screw Driver

Level

Pencil

Drill

Instructions

1. Choose Bottle Direction

The 2 Strips are different – locate according to the direction you want the bottles to face – in the diagram to the right the B strip is to the right of the A strip – so necks are to the right.

2. Mark Walls for Strip Locations

Work out the spacing of the strips according to the length of wall you want to rack – use drawing to the right to assist. Use a pencil and the level to mark the wall where the strips are to be located

3. Fastening

Locate the strip in position and mark the hole locations with a pencil. If gyprock wall – drill 8mm holes for drywall plugs. If timber wall (or studs are encountered) – screw directly into the timber. If masonry wall – drill 6.5mm hole for green wall plugs (not supplied)

4. Fix Strips to wall

Use Screws (provided) to screw the strips to the wall.

5. Insert Hole Covers

Push Screwhole Caps (provided) into holes to cover screws.

6. Fill Racks with Wine – enjoy!
